## DETAILED ACTION

### *Specification*

1. The use of the trademarks Oracle8i, Netegrity SiteMinder, en Commerce, getAccess, Entegrity, Aventail, MS IIS, and Netscape Enterprise Server has been noted in this application. They should be capitalized wherever they appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Other examples of a similar nature can be found on page 14 lines 7, 8 and page 16 lines 1, 4, and 8-10. Please check the rest of the instant specification. Appropriate correction is required.

### *Drawings*

The drawings are objected to as cited on the Draftperson's Patent Drawing Review Sheet.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

**Claims 1, 2, 7-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Davis US 6,367,009.**

2. As per claims 1, 8, 12, and 13 Davis discloses an MTS or middle tier server, verifying a users ID through a digital certificate submitted by the client, (authentication component), (Col 11 lines 39-43). Davis also discloses the ETS or end tier server verifying the users ID through use of a digital certificate, (Col 13 lines 27-31). Davis teaches that the ETS uses access control comprising a list of authorized users, (directory), (Col 13 lines 35-39). Davis discloses that if the user is not on the access control list, the system will restrict access, (access control system), (Col 13 lines 40-42).

As per claims 2, 9, and 14, Davis teaches that the access policy declares that unauthorized users have access to no portion of the computer site, (Col 13 line 42).

As per claim 7, Davis discloses the computer site is in an extranet, (Col 9 lines 17-19).

As per claim 10, a user would submit a URL request as part of the internet request, (Col 9 lines 14-17).

As per claim 11, Davis discloses sending a digital signature inside a certificate. A digital signature can be decrypted with a public key, (Col 12, line 54).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 4-6, 16, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis US 6,367,009 in view of Ginzboorg US 6,240,091.**

3. As per claims 4, and 16, Davis does not teach a log system to record user actions in a computer site.

Ginzboorg discloses by means of charging records, a log system to record user interaction with a computer site, (Col 8 lines 22-26, Col 11 lines 17-21).

It would have been obvious to one skilled in the art to modify the access policy of Davis with the recording system of Ginzboorg to provide the necessary data for billing purposes (Ginzboorg Col 3 lines 2-4).

As per claims 5, 6, and 17, Davis does not disclose provide a transaction authentication system to produce verified records of transactions performed using the computer site.

Davis does not disclose that the transaction authentication system includes a digital signing module for validating transactions.

Ginzboorg discloses a system that produces records of transactions using a computer site and verifies these records using digital signatures, (Col 8 lines 30-34, 40-41).

It would have been obvious to one skilled in the art to modify the access policy of Davis with the recording system of Ginzboorg to provide the necessary data for billing purposes (Ginzboorg Col 3 lines 2-4).

**Claims 3, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis US 6,367,009 in view of Grimmer US 5,774,552.**

4. As per claim 3, Davis does not disclose a certificate authority to issue a digital certificate to the user.

Art Unit: 2134

Grimmer discloses that a Certificate Authority issues a digital certificate to the user, (Col 5 lines 55-65).

It would be obvious to one skilled in the art to modify the access policy of Davis with the certificate authority of Grimmer, because the Certificate Authority provides a secure trusted source, (Grimmer Col 5 lines 24-27).

*Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher J Brown whose telephone number is 703-305-8023. The examiner can normally be reached on 8:30-6:00.
